DocPro : a new tool to connect PhDs with employers

Doctorate holders have a **potential for innovation**. Because they learn by doing research, they are scientific experts and know **how to solve complex problems**. Among the other skills that they develop and that are useful for the companies' future: **sense of initiative**, **creativity** and **synthetic thinking**. Most of PhDs decide to transition into the industry, which is now the most significant employer of researchers.

DocPro is an online platform that aims at connecting PhDs from all disciplines and companies. Doctorate holders can pinpoint the skills they developed during their doctorate and increase their communication efficiency towards employers, especially by giving appropriate examples from their own experience. Companies can use the tool to present the kind of profiles they are looking for and increase their attractiveness.
